CYBERSTER
RED TEAMING

INTERNSHIP TASK REPORT

Advanced Recon & Attack Surface Mapping

Name	**Sallar Ali Ahmad Khan**
Roll No	**CSI-B1-026**
Internship Program	**Cyberster Internship**
Task Title	**Advanced Recon & Attack Surface Mapping**
Target Domain	**vulnweb.com**
Engagement Type	**Passive Reconnaissance**

TOOLS USED

`Subfinder`	`Amass`	`Httpx`

Date: March 6, 2026

CLASSIFICATION: TRAINING / AUTHORIZED ENGAGEMENT

🔍 RECONNAISSANCE REPORT

Target: vulnweb.com

Internship — Week 1 Deliverable

Classification: TRAINING

Date: March 6, 2026

---

1. Executive Summary

Target domain vulnweb.com is an intentional vulnerability testing platform operated by Acunetix. It hosts multiple web application frameworks for security training purposes. The reconnaissance phase uncovered a broad attack surface across at least 11 subdomains, all resolving to a single IP address (44.228.249.3) hosted on AWS EC2.

Key findings from this week's passive and active reconnaissance:

- 11 unique subdomains/hosts discovered across four recon tools (subfinder, assetfinder, amass, dnsdumpster).
- Multiple live HTTP endpoints confirmed via HTTP probing (200/301 responses).
- Technology stack includes PHP, ASP.NET, HTML5, and REST-based applications.
- DNS records reveal mail (MX) and nameserver (NS) infrastructure.
- No API keys, passwords, or AWS secrets found via GitHub/search dorks.

Attack Surface Size	OSINT Exposure
11 subdomains | 1 IP block | 4 frameworks	No credentials leaked | DNS fully mapped

2. Asset List

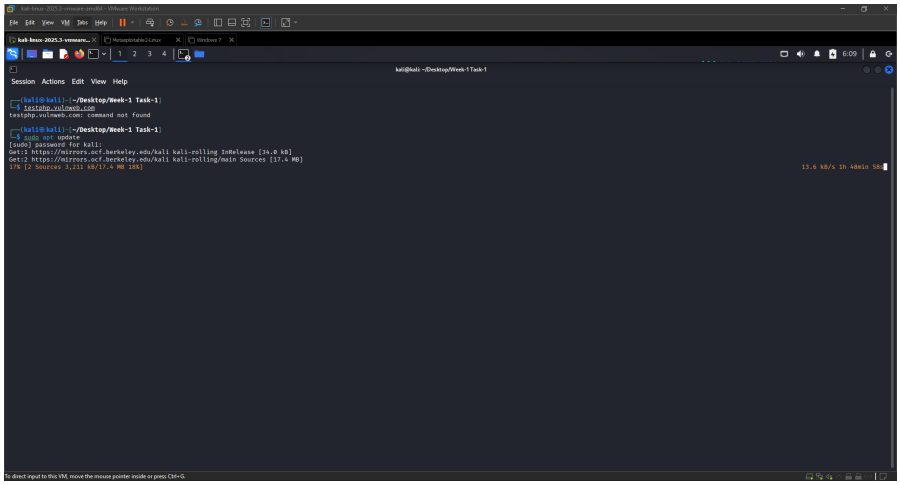
The following subdomains and IPs were discovered by combining output from subfinder, assetfinder, amass, and dnsdumpster, then deduplicating with sort -u into master_subdomains.txt. HTTP probing confirmed live status.

2.1 Discovery Commands

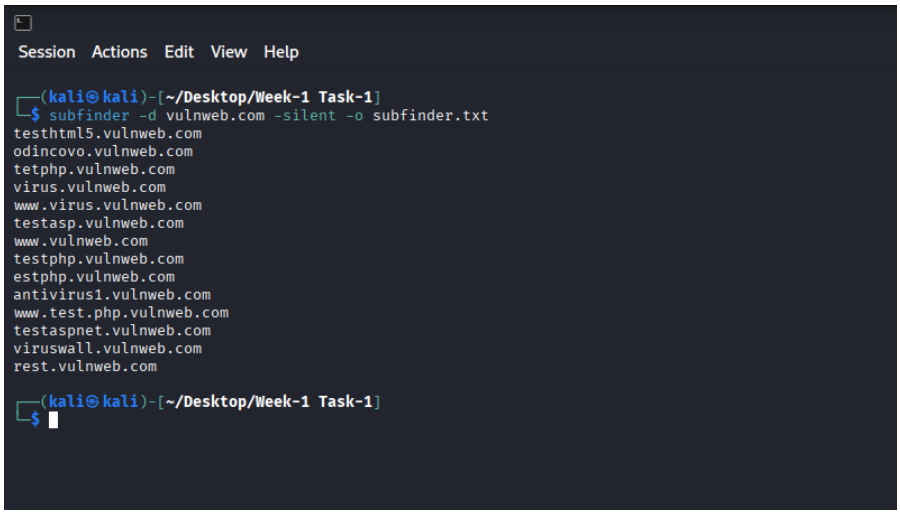
```
subfinder -d vulnweb.com -silent -o subfinder.txt
assetfinder --subs-only vulnweb.com > assetfinder.txt
amass enum -passive -d vulnweb.com -o amass.txt
cat subfinder.txt assetfinder.txt amass.txt | sort -u > master_subdomains.txt
wc -l master_subdomains.txt
```

2.2 Screenshot Evidence — Subdomain Enumeration

subfinder output:



subfinder.txt contents + line count:



assetfinder output:

```

```
┌──(kali㉿kali)-[~/Desktop/Week-1 Task-1]
└─$ grep -oE "[a-zA-Z0-9.-]+\.vulnweb\.com" dnsdump.csv | sort -u > dnsdump.txt
```

2.4 Consolidated Asset Table

Subdomain / Host	IP Address	Discovery Source	HTTP Status
testphp.vulnweb.com	44.228.249.3	subfinder, assetfinder, amass	HTTP 200
testhtml5.vulnweb.com	44.228.249.3	subfinder, amass	HTTP 200
testasp.vulnweb.com	44.228.249.3	subfinder, assetfinder	HTTP 200
testaspnet.vulnweb.com	44.228.249.3	subfinder, assetfinder	HTTP 200
testfire.vulnweb.com	44.228.249.3	amass	HTTP 301
rest.vulnweb.com	44.228.249.3	assetfinder, amass	HTTP 200
vulnweb.com	44.228.249.3	whois / nslookup	HTTP 200
www.vulnweb.com	44.228.249.3	dnsdumpster	HTTP 301
mail.vulnweb.com	44.228.249.3	dnsdumpster (MX record)	Unknown

ns1.vulnweb.com	44.228.249.3	dnsdumpster (NS record)	Unknown
ns2.vulnweb.com	44.228.249.3	dnsdumpster (NS record)	Unknown

3. Technology Map

Technology fingerprinting was performed using WhatWeb, WHOIS, nslookup, and GitHub/search-engine dorks to identify frameworks, services, and infrastructure details of the vulnweb.com attack surface.

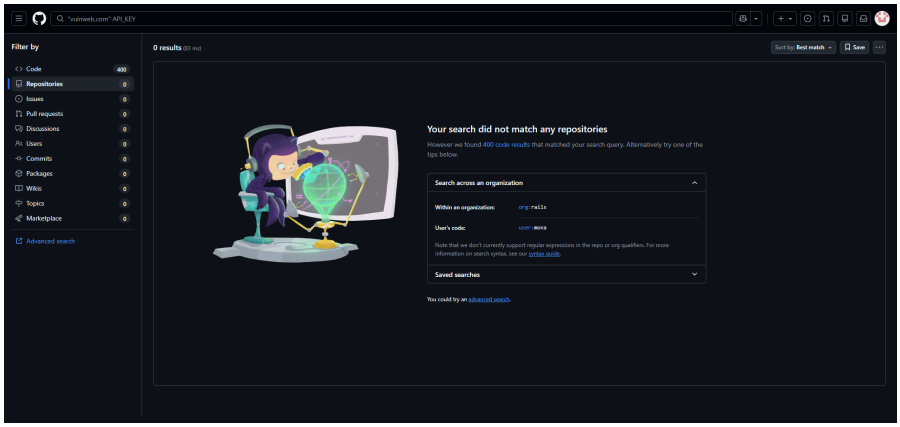
3.1 WhatWeb & DNS Fingerprinting

```
whatweb http://testphp.vulnweb.com > tech.txt
whois vulnweb.com > whois.txt
nslookup vulnweb.com > dns.txt
nslookup -type=MX vulnweb.com >> dns.txt
nslookup -type=NS vulnweb.com >> dns.txt
```

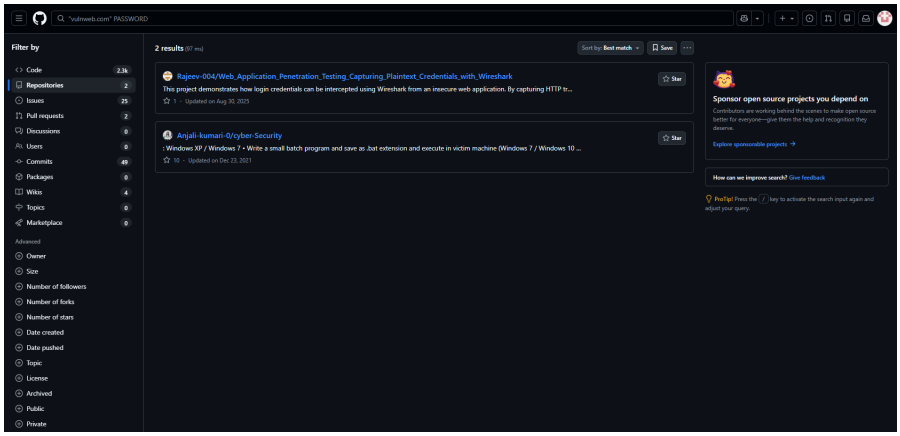
3.2 OSINT / GitHub Dork Search

GitHub/search dork queries were run to check for accidental credential exposure in public repositories or indexed pages.

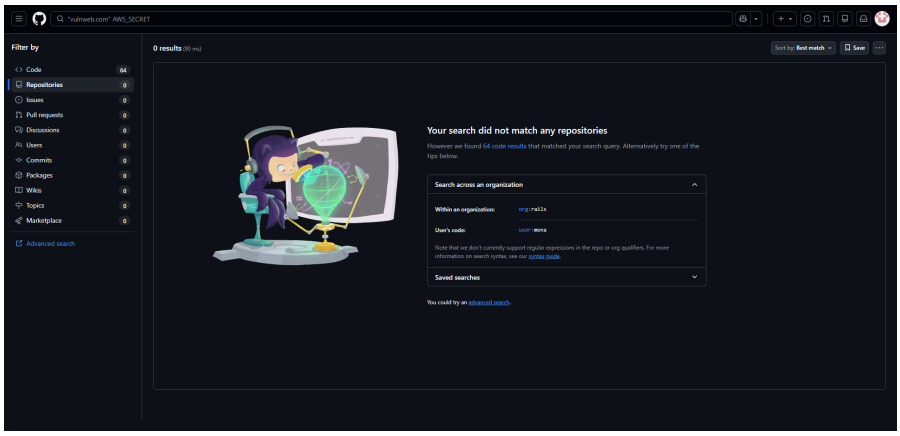
```
"vulnweb.com" API_KEY
```



```
"vulnweb.com" PASSWORD
```



```
"vulnweb.com" AWS_SECRET
```



3.3 OSINT Dork Results Summary

Dork Query	Result	Risk Level
"vulnweb.com" API_KEY	No public API key leaks found	Low
"vulnweb.com" PASSWORD	No plaintext passwords found	Low
"vulnweb.com" AWS_SECRET	No AWS secrets exposed	Low

3.4 HTTP Live Host Probing

After assembling the master subdomain list, all hosts were probed for live HTTP responses to confirm active attack surface.

```
while read url; do curl -Is http://$url | head -n 1 | grep "200\|301\|302" && echo $url;
done < attack_surface.txt > live.txt
wc -l live.txt
cat live.txt
```

```
┌──(kali㉿kali)-[~/Desktop/Week-1 Task-1]
└─$ while read url; do curl -Is http://$url | head -n 1 | grep "200\|301\|302" && echo $url; done < attack_surface.t
xt > live.txt

┌──(kali㉿kali)-[~/Desktop/Week-1 Task-1]
└─$ wc -l live.txt
14 live.txt

┌──(kali㉿kali)-[~/Desktop/Week-1 Task-1]
└─$ cat live.txt
HTTP/1.1 200 OK
rest.vulnweb.com
HTTP/1.1 200 OK

testasp.vulnweb.com
HTTP/1.1 200 OK
testhtml5.vulnweb.com
HTTP/1.1 200 OK
testphp.vulnweb.com
HTTP/1.1 200 OK
vulnweb.com
HTTP/1.1 200 OK
www.vulnweb.com
```

3.5 Full Technology Map Table

Category	Technology / Finding	Source
Web Framework	PHP (testphp.vulnweb.com)	WhatWeb / HTTP headers
Web Framework	ASP.NET (testasp / testaspnet)	WhatWeb / subdomain pattern
Web Framework	HTML5 (testhtml5.vulnweb.com)	Subdomain pattern
Web Server	Apache / Nginx (inferred)	WhatWeb
DNS Provider	Acunetix DNS infrastructure	whois + nslookup
Mail Server	MX record present (mail.*)	nslookup -type=MX
Registrar	Acunetix (intentional vuln target)	whois
IP Block	AWS EC2 (44.228.249.3)	nslookup + IP lookup
Open-Source Intel	No API keys / secrets found	GitHub dork search
Live Hosts	Multiple HTTP 200/301 endpoints	curl HTTP probe (live.txt)

4. Methodology Summary

Task	Description	Tools Used
Task 1	Subdomain enumeration via passive DNS tools; merge & deduplicate results	subfinder, assetfinder, amass, dnsdumpster
Task 2	Technology fingerprinting & DNS record mapping (A, MX, NS)	WhatWeb, whois, nslookup
Task 3	OSINT credential / secret search via search-engine dorks	GitHub search, Google dorks
Task 4	HTTP probing to identify live hosts from combined subdomain list	curl, bash scripting
